

Switchcraft®

RMA51 Mic Splitters

Features

Single XLR input split to 3 balanced XLR outputs (2 isolated, 1 direct)

Mu-metal shielded transformers eliminate ground loops, improve CMRR and block phantom power from interconnected equipment for ultra-clean audio paths free of hum and buzz

Direct output allows proper connection to pass phantom power for condenser microphones and active DIs

Ground lift switch on each isolated output for additional grounding flexibility

40dB pad for use with line level equipment

Premium Switchcraft ferrite-shielded XLR connectors for extra EMI/RFI protection

RMA51 Mic Splitters

The Switchcraft RMA51 is a passive 3-way transformer isolated microphone splitter ideal for sending a single balanced audio input to 3 unique destinations.

The RMA51 is available with either Jensen or premium custom transformers to provide 100% isolation from noise and a truly uncolored audio output.

Uses:

Stage: Connect microphones, DI's, keyboards, etc. to multiple destinations such as monitor, FOH and recording consoles.

Broadcast: Provide 3 isolated feeds from one source for ENG and news conferences.
